PYTHON Task 4

You listen various tones (dial, ringing, busy) using a telephone. These tones are generated with a combination of sine wave of various frequency. The tone plan is based on ITU-T Standard recommendation. The dial tone is a continuous tone of the addition of the frequencies 350 and 440 Hz. The ringing tone comprises frequencies of 440 and 480 Hz and a cadence of 2 seconds ON and 4 seconds OFF. The busy tone has frequency components of 480 and 620 Hz and a cadence of one half second ON and one half second OFF. Use this tone plan to generate **BUSY TONE/DIAL TONE**. Use a speaker to listen BUSY/DIAL TONE by applying command playsound. While generating the sinewave, mind its amplitude (take 0.1 volt).

pip install playsound
